

Daystate

Daystate is synonymous with supreme quality, highly advanced air rifles. With a history of success in the competition and professional pest control arenas, it is the marque every airgunner aspires to – and backed-up by well-established international dealer and distributor networks, Daystate air rifles are recognised, sought after and used to good effect around the globe.

Pioneer of the modern-day precharged pneumatic (PCP), for over four decades Daystate has maintained its position at the forefront of airgun design with numerous ground-breaking developments, including the electronic MK3 rifle, Slingshot hammer/valve system and highly-decorated Red Wolf.

This year, however, sees the release of its most ambitious undertaking yet – the **Delta Wolf**: by design, the most advanced air rifle in the world. Bar none.

The new **Delta Wolf** pushes the airgun envelope to another level, incorporating features like an integral chronoscope, an all-new magazine system, user-adjustable Huma-Air regulator and a touch screen to easily control its computer-programmed, multi-function electronic action.

The feature-laden specifications list highlights the **Delta Wolf's** impressive credentials – never before has a Daystate model carried such an array of attributes, nor offered such personalised adjustability for its user.

Yet despite its apparent complexity, the new **Delta Wolf** still puts the shooter in total control, courtesy of the ergonomics afforded by its trendy tactical, AR-style chassis and easy-to-navigate onboard computer.

Put simply, Delta Wolf is tomorrow's air rifle for today's demanding shooter

DELTA WOLF

BY DESIGN, THE MOST ADVANCED AIR RIFLE IN THE WORLD...

1. New **Advanced Velocity Technology** (AVT) electronic management system – no other air rifle incorporates such advanced technology
2. Unique **built-in chronoscope** displays velocity and controls shot-consistency
3. All **barrels are A.R.T-developed** (Accuracy Research Team), ensuring maximum performance across all pellet types and power levels
4. A.R.T barrels **compatible with the latest generation of airgun 'slug' ammo** like Rangemaster Juggernaut
5. Ultra-quiet muzzle report courtesy **large (30mm dia.) carbon-fibre shroud**, machined to accept optional OdB Silencer
6. New **'fast-flow' valve system** allows for air transfer rate changes without valve adjustment
7. Exclusive **factory-fit Huma-Air regulator** works in tandem with AVT system to maximise shot consistency and air efficiency
8. Regulator's **34cc volume plenum chamber is biggest in class**, maximising rifle's hi-power capability
9. Speedy autoload **sidelever action, user-convertible for right/left-hand operation** in around 60 seconds
10. Newly-developed, auto-feed **magazine with a larger capacity** (8-13 shots, according to calibre) and flip-open gate for speedier loading
11. **Payload can be doubled** by pairing magazines in the breech – no tools required
12. **Removable lightweight carbon-fibre bottle** for 'on-the-fly' bottle replenishment or fast air removal, with integral quick-fill charging for simplicity
13. **Movable Picatinny 'intermount' scope rail and cheekpiece** caters for day and NV scope types, and both short/long eye-relief requirements
14. **Picatinny belly- and side-rails** take a huge range of accessories across multiple shooting remits
15. **Electronic match trigger** complemented by multi-position blade adjustment
16. **AR-style pistol grip** affords superior ergonomics and offers option of fitting other grip styles
17. Familiar **AR-style safety catch switch** (manual)
18. **Height-adjustable butt pad**
19. Exclusive **range of optional PRS accessories available** to customise rifle to suit user's exact needs
20. Integral high capacity Li-Po battery with standard USB-C charging port 'on gun' – **up to 3,000 shots per battery charge** (dependent on use)
21. **Future-proofed design** – Bluetooth® module incorporated into electronics to cater for apps and other accessories in ongoing development
22. **Shooter-swappable, barrel system** (no-tools-required) – with .177, .22, .25 and .30 calibres available (600mm length for FAC); .177 and .22 in 430mm 'carbine' length*
23. AVT action **automatically re-programs firing cycle** and power to reflect barrel changes*
24. **User-tuneable action via touchscreen** – allows shooter to set chosen velocity (or power in increments below 100%*) to suit ammunition/shooting requirements
25. Weight - 3.1 kg/6.84 lb approx.; Length - 840mm/34in (600mm barrel model)

** Unlicensed model for UK is restricted to 12 ft/lbs*
